Help lines (save these numbers)

Emergency: call 911 when someone is in danger.

Essential equipment

Oxygen concentrator: backup not confirmed. Runtime on backup: unknown — confirm with the manufacturer or care plan.

Getting somewhere else

Vehicle: 5 seats.

Stored water

Storage target for 4 people for 3 days: 12 US gallons (CDC storage planning target, before pet needs; not a clinical drinking prescription). Stored now: 5 US gallons.

Add extra water for pets.

Plan dates

Plan generated 2026-10-09. Household information revision 1; home revision 1; content version 2026.10.0.

Not yet reviewed by the household.

If this happens: Home fire

Do this first

Get out and stay out. Never go back inside for people, pets, or belongings.

Use your second way out if smoke or fire blocks the first. Crawl low under smoke.

Go to the outside meeting point, then call 911 from outside.

If you cannot get out, close the door, cover vents and cracks, call 911, and signal from a window.

Practice route in your home

From Parent A — Main bedroom: Main bedroom Hallway Living room outside.

No independent second way out from Parent A — Main bedroom is confirmed in the home model.

From Parent B — Main bedroom: Main bedroom Hallway Living room outside.

No independent second way out from Parent B — Main bedroom is confirmed in the home model.

From Kid — Kid's bedroom: Kid's bedroom Hallway Living room outside.

No independent second way out from Kid — Kid's bedroom is confirmed in the home model.

From Grandpa — Living room: Living room outside.

No independent second way out from Grandpa — Living room is confirmed in the home model.

Meet at: Mailbox at the end of the driveway (fictional)

Practice route under these assumptions only. It is not a real-time safest route; check your actual doors and windows.

Top preparations for this household

Arrange a place to go and a way to get there

Check that every room has a second way out

Plan how your pets leave with you

Help lines (save these numbers)

Emergency: call 911 when someone is in danger.

If this happens: Tornado

Do this first

At a tornado warning, go immediately to your shelter spot: lowest floor, interior room, away from windows.

Cover your head and neck. Help anyone who needs assistance to get there.

Keep a way to receive warnings at night, such as phone alerts or a weather radio.

Do not try to travel to a distant shelter once a warning is issued unless officials direct it and you planned it in advance.

Shelter spot

Shelter spot: Hall closet (lowest floor, interior, away from windows, as confirmed by the household).

This is a household-chosen spot, not an engineered safe room.

From Parent A — Main bedroom: Main bedroom Hallway Hall closet.

From Parent B — Main bedroom: Main bedroom Hallway Hall closet.

From Kid — Kid's bedroom: Kid's bedroom Hallway Hall closet.

From Grandpa — Living room: Living room Hallway Hall closet.

Essential equipment

Oxygen concentrator: backup not confirmed. Runtime on backup: unknown — confirm with the manufacturer or care plan.

Top preparations for this household

Make an outage plan for Oxygen concentrator with your supplier or care team

Confirm a backup that works with Oxygen concentrator

Store 12 US gallons of water

Help lines (save these numbers)

Emergency: call 911 when someone is in danger.

If this happens: Flash flood

Do this first

Turn around, don't drown: never walk, swim, or drive through flood water.

Move to higher ground right away when told to, or when water is rising. Follow official instructions.

Never drive around barricades. Map directions do not show whether a road is flooded.

If you have no car, contact your agreed ride or local officials early, before roads close.

Getting somewhere else

Vehicle: 5 seats.

Emergency: call 911 when someone is in danger.

If this happens: Freeze with power loss

Do this first

If an essential device loses power, follow its care plan and the backup you arranged. In an emergency, call 911.

Never use an oven, stove, grill, or camp heater to heat your home.

Use a generator only outdoors, at least 20 feet from windows, doors, and vents. Never run one in a home or garage.

If heat stays off, go early to the warm place you agreed on, while travel is still possible.

Keep the refrigerator and freezer closed. Use stored water first.

Getting somewhere else

Vehicle: 5 seats.

Emergency: call 911 when someone is in danger.

If this happens: Heat wave with grid strain

Do this first

Move to your agreed cooled place before the home heats up, especially anyone who is heat-sensitive.

A fan alone may not prevent heat illness in extreme heat.

Call 911 for signs of heat stroke, such as confusion, fainting, or a very high body temperature.

Ask the care provider in advance how heat or a power outage affects medicines and equipment. Do not change medicines on your own.

Emergency: call 911 when someone is in danger.

If this happens: Water outage

Do this first

Follow the exact advisory from your water utility. Different advisories need different actions.

Boil water advisory: use bottled or stored water, or bring tap water to a rolling boil for 1 minute (3 minutes above 6,500 feet), as your utility advises.

Do not drink advisory: do not drink the tap water and do not boil it. Boiling does not remove chemicals.

Do not use advisory: do not use tap water for any purpose. Use stored or bottled water.
